SUMMARY

Product designer with **5+ years** in AI-native and enterprise SaaS, turning complex, data-heavy workflows into clear, usable interfaces across finance, insurance, manufacturing and retail. Takes products from first concept to shipped release, often as sole designer, working closely with engineering and using AI for faster research, ideation and prototyping.

EXPERIENCE

LeewayHertz Technologies
Gurugram (Remote)

Senior UI/UX Designer
Apr 2026 – Present

- **Designed the admin console for ZBrain.ai**, an AI-native platform for building agents and workflows. Worked closely with the engineering team to learn how agents, connectors, agentic solutions and API keys work, then turned that into one console where admins monitor and manage all of them. It is live, and **12+ enterprise organisations** govern their agents through it.
- **Built ZBrain's design system** (120 variables, 86 component variants, 120 icons), used across the admin and user portals, and turned it into an AI-ready guide: 27 people on the product team prototype from it, generated screens come out about 80% accurate, and time spent fixing design **dropped by ~60%**.
- Led the end-to-end design of 0-to-1 features for a **conversational troubleshooting copilot** on mobile and web, built for Applied Materials. Ran usability testing with the 100+ field engineers in its pilot, and their test report showed **60% less time to find a fix** and 70% fewer escalations; the console logs a 64% resolution rate.
- **Extended the copilot with an admin console**, where admins track adoption, conversations, resolution rate and response time, and a feedback loop: a flagged answer becomes a scoped, versioned fix that every later answer reuses, so the copilot improves with use.
- Owned post-deployment design QA and **mentored 2 designers** through structured critique, while sustaining **80% first-iteration client acceptance** across engagements.

UI/UX Designer
May 2021 – Mar 2026

- **As sole designer, delivered three connected portals** for Fresenius Medical Care (Cash Application, Invoice to Pay, Admin), so finance teams handle payment and invoice exceptions in one consistent flow built on reusable UI patterns.
- **Designed five connected portals** for Americold (risk, profile adherence, compliance, safety training and admin) and a training chatbot, also as sole designer, handling data from 230+ facilities. Mapped exception conditions so each screen shows the right data, and built about **90% of the system from reusable components** across its tables, forms and detail views.
- **Built an AI-grounded insurance claim assessment tool** for Safe-Guard Products International, cutting **processing time 40%** and manual effort 25%.
- **Redesigned The Hackett Group's 40+ high-traffic pages** for brand and accessibility, **lifting pages per session 30%**.
- **Shipped web and mobile applications** for global clients such as SobonSobo, Scrut and BabyPass.

Freelance · Product Designer — 2020 – 2021

Tech Mahindra · Support Engineer — 2017 – 2020

SKILLS

AI & Enterprise. AI-Native Products, Agentic AI Workflows, Semantic Search, Conversational UI, AI Governance

Product & UX. User Research, Information Architecture, User Flows, Wireframing, Prototyping, Interaction Design

UI & Systems. Design Systems, Component Libraries, Design Tokens, Data-Heavy Interfaces, Dashboards, WCAG

Craft & Leadership. Design Critique, Mentoring, Design QA, Stakeholder Management, Developer Handoff, Agile & Scrum

Tools. Figma, FigJam, Photoshop, Illustrator, Claude Code, ChatGPT

EDUCATION & LANGUAGES

Bachelor of Technology in Computer Science & Engineering, West Bengal University of Technology — 2013 – 2017

Languages. English, Hindi
